What are the different levels of strategy and the strategic choices in each level?

There are three levels of strategy, (i) the corporate level, (ii) the business unit level, and (iii) the functional level. At the corporate level, the fundamental strategic choice is: "What business should we be in?" At the business unit level, the choice shifts to: "How do we gain and sustain competitive advantage in this business?" At the function level the strategic choice is: "How should total compensation help this business gain and sustain competitive advantage?"

74. Compensation systems can be tailored to general business strategies. List and explain these strategies.

Compensation systems can be tailored to three general business strategies:

- i. The innovator stresses new products and short response time to market trends. A supporting
 (p. 38 compensation approach places less emphasis on evaluating skills and jobs and more emphasis on incentives designed to encourage innovations.
 - ii. The cost cutter's efficiency-focused strategy stresses doing more with less by minimizing costs, encouraging productivity increases, and specifying in greater detail exactly how jobs should be performed.
 - iii. The customer-focused business strategy stresses delighting customers and bases employee pay on how well they do this.

Explain AMO theory.

Boxall and Purcell find an increasingly common "very basic theory of performance" being used, which they refer to as "AMO theory":

75. P = f(A, M, O)

(*p.* 40 "P" is performance, which is specified to be a function (f) of three factors: "A" is ability, "M" is motivation, and "O" is opportunity.

In other words, HR systems will be most effective when roles are designed to allow employees to be involved in decisions and have an opportunity to make an impact, when employee ability is developed through selective hiring and training and development, and when the compensation system motivates employees to act on their abilities and take advantage of the opportunity to make a difference.

Milkovich - Chapter 02 #77

What is the first step in assessing total compensation implications?

78.

(p. 44 The first step in assessing total compensation implications includes an understanding of the specific industry in which the organization operates and how the organization plans to compete in that industry. This corresponds with the strategic choices in the corporate and the business unit levels: What business should we be in, and how do we win in that business?

80. Write short notes on Virtuous and Vicious Circles.

(p. 54-

55)

Virtuous Circle - Thinking of pay as part of a circle suggests that performance-based pay works best when there is success to share. An organization whose profits or market share is increasing is able to pay larger bonuses and stock awards which fairly improve employee attitudes and work behaviors,

which in turn improves their performance. The circle gains upward momentum. Employees receive returns that compensate for the risks they take. And they behave like owners, since they are sharing in the organization's success.

Vicious Circle - Circles can also gain momentum going downward to become a vicious circle. When organization performance declines, performance-based pay plans do not pay off; there are no bonuses, and the value of stock declines—with potentially negative effects on organization performance. Declining organization performance increases the risks facing employees—risks of still smaller bonuses, demotions, wage cuts, and even layoffs. Unless the increased risks are offset by larger returns, the risk-return imbalance will reinforce declining employee attitudes and speed the downward spiral.
